# Only a Stainless Could Be This C

American LaFrance engineers make extensive use of computer design capabilities, resulting in precise fits and well-planned customization, down to the smallest detail.

American LaFrance builds polypropylene water and foam tanks in its own facility, which assures conformance to workmanship, specification and warranty responsibility.

Modular design means pump and enclosure, water tank, cab components – even body compartments can be individually replaced. Your Century 2000 will serve more firefighting requirements and considerably less time in the shop.

Minimize corrosion, with body, pump enclosure, and cab made of 304L stainless steel. Enjoy years of added service and retained value while you minimize maintenance and repair.

# Steel Pumper Good an Investment

An American LaFrance Century 2000 is on the scene, with features which make it the best long-term investment available in 21st Century fire apparatus.

Features like: stainless steel cab and body, and polypropylene water tank to withstand the punishment of everyday firefighting environments;

Features like: modular, bolted assembly, and computer-designed components. When damaged, they can be changed out in a hurry, getting your unit back in service while saving the costs of extensive repairs;

Features like: total customization.

When you want the very best equipment, you want

it designed for your style of firefighting. American LaFrance engineers understand that . . . and Century 2000 does it right the first time.

Century 2000: a state-of-the-art vehicle built to meet your requirements.

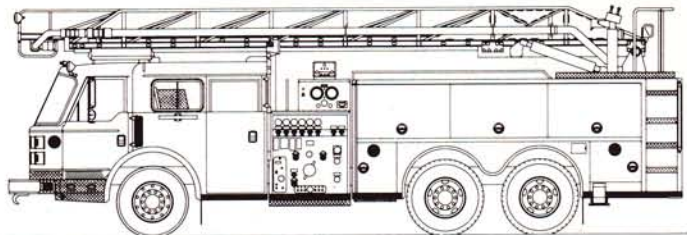

All this, backed by nationwide service. And financing through Figgie Leasing Corporation is readily available.

## What Makes Century 2000 special?

**STRENGTH AND LONG LIFE** – The Century 2000 cab, body, and pump enclosure are 304L low-carbon stainless steel to resist corrosion. Fasteners are also stainless steel. Non-conductive barriers prevent corrosion caused by contact of dissimilar metals.

**FAST, LOW-COST REPAIRS** – Modular, stainless steel compartments are bolted into Century 2000 bodies. In case of damage, individual units can be changed out quickly and economically.

**HIGH-OUTPUT PUMPING** – Inside Century 2000's modular, stainless steel pump enclosure operates an American LaFrance 1500- to 2000-GPM TwinFlow pump, or Hale pump of your choice.

The user-friendly control panel, with in-line push-pull controls and full instrumentation, is easily understood and operated, either in side-mount or top-mount configuration.

The water tank, made of 1/2" polypropylene, will not crack, corrode or leak. We guarantee it.

**SUPERIOR STANDARDS, EXTRAORDINARY APPEARANCE** – Century 2000's sleek, rounded cab seats seven passengers. Large window areas give much greater visibility. The Chalmers rear suspension provides softer, safer maneuvering in tight quarters.

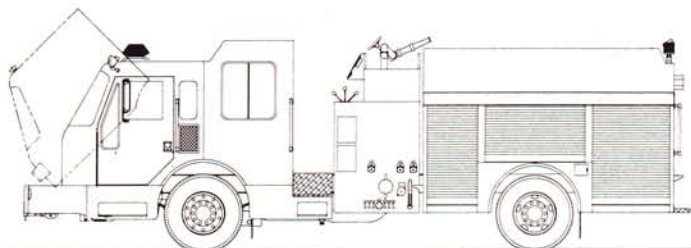

Equipment storage space is maximized, with 25"-deep lower compartments on each side, and one upper/one lower compartment behind the water tank. Special sound absorbing cab upholstery provides quieter ride, and promotes accurate communications.

**HIGH-PERFORMANCE OPTIONS** – With Century 2000, you can choose from options such as 6V, 8V, or 60-Series Detroit Diesel, or Cummins L-10 engines; electronically-controlled Allison automatic transmissions; and heavy-duty Rockwell axles with disc brakes. Custom engineering enables customers to design their own configurations and detail features.

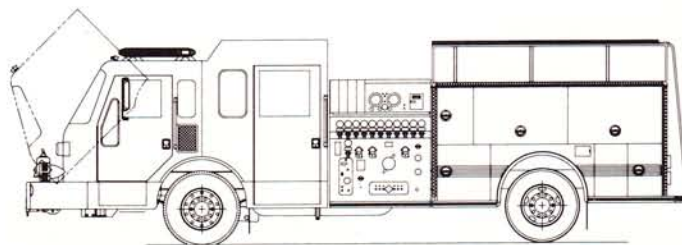

**FAST, NATIONWIDE SERVICE** – With Century 2000, you save time and money on vehicle maintenance.

American LaFrance offers service across the U.S. Each service center stocks parts to provide faster turnaround. In fact, American LaFrance will have any major Century 2000 component, including modular compartments, water tanks, etc., within 30 days of your order. We guarantee it!

*Apparatus this versatile and this luxurious has to come from American LaFrance. Don't settle for less. Call your authorized representative or the factory today for prompt, professional assistance.*
