

WATER CHIEF II

AMERICA'S LEGENDARY
Fire Truck

Only An American Could Be This Good

American LaFrance engineers make extensive use of computer design capabilities, resulting in precise fits and well-planned customization, down to the smallest detail.

Unique arch brace design provides an exceptionally strong yet lightweight ladder. Maximum rigidity and absolute minimal "torquing" at full extension provide the utmost in personnel confidence.

Dual side-mounted waterways provide 1000 GPM nozzle flow at any aerial configuration. Piping is hard-anodized, and telescoping joints are equipped with dual wear rings, a wiper and a pressure compensating seal, providing extended service life with minimal maintenance.

Microprocessor-based control system features self diagnostic maintenance menu and trouble-shooting menu. Adjustments are simple, and directions easy to understand. Control stations are linked and can be located almost anywhere on your vehicle. An optional remote fiber optic control station is available for off-vehicle control in severe fire ground situations.

LaFrance Quint and An Investment

An American LaFrance Water Chief II is on the scene with features which make it the best long-term investment available in 21st Century fire apparatus. Features like: pressure and flow compensating hydraulic pump; automatic cushion stops in each hydraulic cylinder; side-mounted waterways; self diagnostic control system: all of which address the most sought-after improvements by aerial ladder users, nationwide.

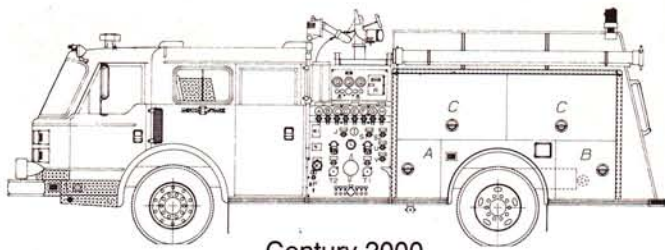

Water Chief II, combined with our stainless steel modular body and stainless steel cab on short-wheelbase tandem chassis, provide your community with state-of-the-art quint capability, extended service life and minimal maintenance.

Arch-braced ladders, self-diagnostic controls, stainless cabs and modular bodies...only from American LaFrance.

What Makes Water Chief II Special?

STRENGTH AND LONG LIFE - The Water Chief II cab, body and pump enclosure are 304L stainless steel to resist corrosion. Fasteners are also stainless steel. Modular body design enables a variety of equipment storage options and individual compartment replacement. Water tanks are made of 1/2" polypropylene and will not crack, corrode or leak. We guarantee it.

HIGH-OUTPUT PUMPING - Inside Water Chief II's modular pump enclosure operates an American LaFrance 1500-2000 GPM TwinFlow pump or a Hale pump of your choice. Dual waterways provide elevated flows of 1000 GPM in any configuration.

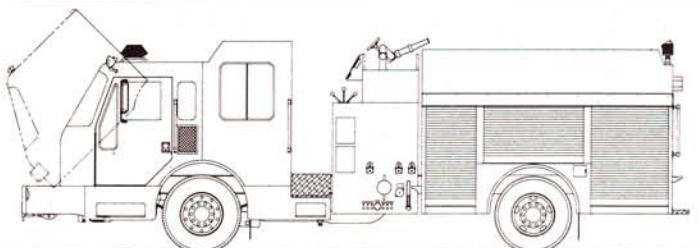

SUPERIOR STANDARDS - Arch brace-design ladder with torque box subframe and ladder lift subframe are supported by down-and-out style outriggers with 17-foot spread, working together to provide 500 pound tip load at 0° elevation, fully extended. Automatic rotation limiter permits short outrigger extension for set-up in tight areas, but prevents rotation to the unstable zone. Integrated outrigger pad interlock insures against accidental turnover. Automatic cushion stops in all hydraulic cylinders, and dual compensating hydraulic pump enable smooth and precise ladder function operations.

HIGH PERFORMANCE OPTIONS - With Water Chief II you can choose from a host of custom options: 500-gallon water tanks with large hose load capacities; hydraulically lowered ground ladder storage; rear turntable control station; remote fiber optic control station; onboard generators and breathing air systems; customized cabinetry up to 25" deep. And customized engineering enables customers to design their own detail features to suit their firefighting styles and requirements.

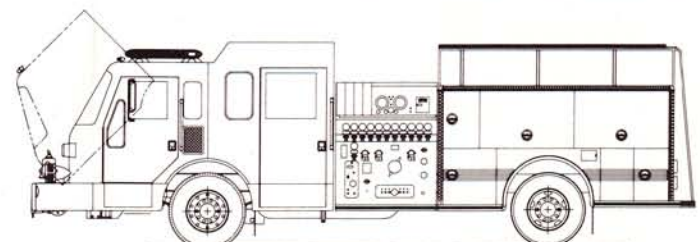

FAST NATIONWIDE SERVICE - American LaFrance offers service across the U.S. Each service center stocks parts to provide faster turnaround, keeping your vehicles in service where they belong.

FINANCING - American LaFrance offers Lease-Purchase Financing for all of its products through Figgie Leasing Corporation. Lease-purchase offers an attractive means to acquire needed apparatus within a manageable budget.

American LaFrance! Don't settle for less. Call your authorized representative or the factory today for prompt, professional assistance.
