AMERICA'S LEGENDARY
Fire Truck

Only a Stainless Steel Could Be This Good

American LaFrance engineers make extensive use of 3-dimension, computer design to give you precise fits and well-planned customization, down to the smallest detail.

45° cab tilt provides generous access to engine and components. Dual sealing surfaces and hidden rain tunneling provide positive protection against water and noise without the problems and costs of pneumatic seals.

Patriot's 304L stainless steel body offers you a choice between traditional swing-out doors or European-style roll-up doors, both designed for "waterproof" storage.

The massive rear compartment holds rescue tools or cascade systems with easy working access. Rear access to stokes basket, back boards and ground ladders can be built in with low ground proximity.

Steel Patriot Pumper and An Investment

Only a pumper with corrosion-fighting, stainless steel cab, body, and pump enclosure, plus polypropylene water tank could hold its value this long...

Only a mid-priced vehicle designed with state-of-the-art computer technology, and built with world-class manufacturing equipment could give you this kind of quality...

Only an apparatus with all these features, matched to your style of fire fighting could come from today's American LaFrance.

American LaFrance engineers and craftsmen combine unsurpassed experience with modern manufacturing technology to be sure every part of your truck is a perfect fit; every seam is straight; every component does its job.

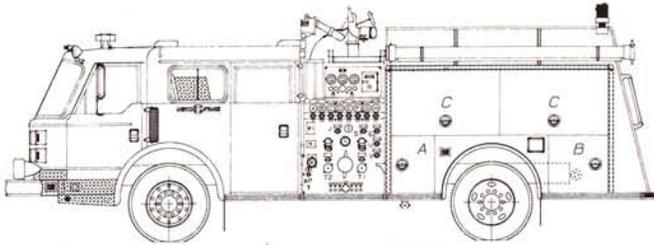

American LaFrance backs your Patriot with nationwide service; and financing through Figgie Leasing Corporation is readily available.

Why is Patriot Special?

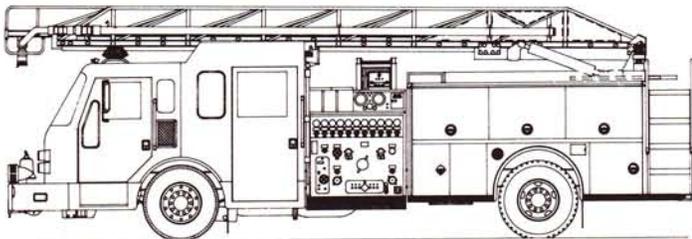

STRENGTH AND LONG LIFE - The Patriot cab, body and pump enclosure are 304L low-carbon stainless steel to resist corrosion. Fasteners are also stainless steel. Non-conductive barriers prevent corrosion caused by contact of dissimilar metals. Patriot water tanks are polypropylene.

UPGRADE IS THE STANDARD - Patriot chassis features an 18,000-pound-capacity front axle; a 10½"-deep frame; cushion-ride front and rear leaf suspension; Koni adjustable shock absorbers; auto slack adjusters with visual indicator; automatic moisture ejectors on all air tanks; function-, color-, and number-coded SXL wiring; power windows; clear-coat paint; noise-absorbing upholstery; air ride front seats; 2900-sq.-in. windshield; 69 in. of rear passenger headroom; and on and on.

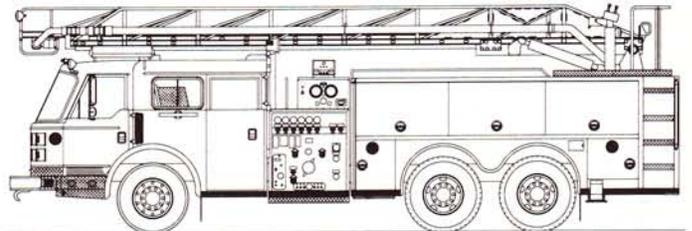

HIGH PERFORMANCE OPTIONS - With Patriot, you can choose "L"-series or "N"-series Cummins, or Detroit "60"-Series options to move as quickly as you want. Of course, we offer engine brakes, transmission retarders, ABS brake systems, and drive line retarders to help stop your vehicle safely, quickly. Patriot also offers Chalmers rear suspensions, modular stainless steel bodies, seating for up to 10 passengers, and American LaFrance TwinFlow pumps or Hale pumps up to 2,000 gpm.

FAST, NATIONWIDE SERVICE - The Patriot saves you time and money on vehicle maintenance. American LaFrance offers service across the U.S. Each service center stocks parts to provide faster turnaround. In fact, American LaFrance will have any major Patriot component within 30 days of your order. We guarantee it!

Apparatus this versatile and this luxurious has to come from American LaFrance. Don't settle for less. Call your authorized representative or the factory today for prompt, professional assistance.
